Tech startups can work in Buffalo
3 successful entrepreneurs explain how

Company founders spoke about what made them successful and the opportunity for others to follow in their footsteps.

GEORGE CHAMOUN, Synacor co-founder, on being a 20-something entrepreneur in Buffalo in the early 2000s:

"with mypersonal.com (a California-based company), bring in West Coast investors and achieve our initial goals for growth capital."

ERIC REICH, Campus Labs co-founder, on seeing something nobody else saw in the early 2000s:

"evolved and become much more important for college campuses. We were there to deliver the cloud infrastructure at a time when it really didn't exist elsewhere."

ROHINI SRIHARI, Content Savvy founder, on leveraging her connections in the real estate business in 2013:

"S
ynacor, Content Savvy and Campus Labs have similar stories. They started with small teams..."
Tech startups can work in Buffalo
3 successful entrepreneurs explain how

Synacor, Content Savvy and Campus Labs have similar stories. They started with small teams in Buffalo that found the right mix of investors and mentors. Revenue grew. Multimillion-dollar exits followed.

But perhaps the most striking commonality is how their founders targeted markets just before they became hot and parlayed that advantage to lasting success.

Now those companies and their principals are vital components in the region’s growing entrepreneurial ecosystem, proving that tech startups can work and thrive in Western New York.

Company founders spoke about what made them successful and the opportunity for others to follow in their footsteps.

GEORGE CHAMOUN, Synacor co-founder, on being a 20-something entrepreneur in Buffalo in the late 1990s:

“It started out with an idea, and that idea was to offer email with identity. Hotmail had just come about and most consumers had AOL addresses, so we allowed your name to be @billsfan or something like that. We didn’t have money but we had folks who helped us, and that’s one of the things Buffalo does have. You’re not just a number here. We have folks in the community who want you to succeed. We got introduced from angel to angel, and we got lucky in that we knew Jordan Levy. In 2001 we were able to pull off a merger with mypersonal.com (a California-based company), bring in West Coast investors and achieve our initial goals for growth capital.”

ERIC REICH, Campus Labs co-founder, on seeing something nobody else saw in the early 2000s:

“You need a great idea and a great team, but it was also the opportunity that existed in the market. When we started out, the word ‘assessment’ wasn’t the buzzword it is today in higher education. Instead of colleges saying they’re doing these things, today you need to show them. Our software helps produce or catalog some of that evidence, and we put it out there in a way that is consumable for various constituents. We did that at a time when it was just beginning to be a priority in higher ed, and it has evolved and become much more important for college campuses. We were there to deliver the infrastructure at a time when we really didn’t exist elsewhere.

ROHINI SRIHARI, Content Savvy founder, on leveraging her expertise in big data in 2012:

“I was working with an artificial intelligence company that was doing text mining-type work for the Department of Defense. That was nice and it gave us an opportunity to develop some really cool technology, but it was almost exclusively government work, and at the end of the day we’d be providing a small piece of a solution. Around that time interest was really growing in big data; everybody was talking about it. I thought to myself...
**Synacor's predecessor, Chek.com, was founded by George Chamoun in 1998, a year after he graduated from the University at Buffalo. The company merged with mypersonal.com in 2001, and completed significant fundraising rounds throughout the 2000s as revenue and employees grew. Synacor went public in February 2012. Though it has struggled recently, Synacor still ranks as one of the biggest tech success stories in Buffalo's history.**

George Chamoun, co-founder and president of sales and marketing at Synacor, shows off the company's technology from its headquarters on the Buffalo waterfront.

**Advice from the pros**

Continued from page 16

"We're already doing this." I founded Content Savvy to focus on the commercial space.

**Chamoun** on how Buffalo-based entrepreneurs don't have to rely on fate anymore:

"When we started we had a ton of support in Buffalo. Sometimes they wrote checks, but they also helped make introductions and work on the business. But it was fate that I was brought to the right people. Today that's becoming more formalized. There are at least two groups dedicated to networking between entrepreneurs, mentors and investors. That's maturity in our ecosystem that will help the next generation of tech companies.

---

**Srihari** on finding investors outside of Buffalo:

In late 2011, early 2012, we started trying to raise money for the company. We first looked in Buffalo, but there were limited opportunities for that here. We were developing this full content, big data analytics platform and solution, so we had to pace that based on the investment. As the money came in, we had to keep spending and building it out. I eventually raised about $1.2 million, but it came in bits and pieces and over a period of time, primarily from the West Coast. There was a compromise in that I decided to have the company here, but I also realized that I needed to be traveling a lot. I made several trips to the West Coast, met with funders, with potential customers. So even though the company was based here, most of the work in terms of content and investment was done outside of Buffalo.

SRIHARI on finding investors outside of Buffalo:
“In late 2011, early 2012, we started trying to raise money for the company. We first looked in Buffalo, but there were limited opportunities for that here. We were developing this full content, big data analytics platform and solution, so we had to pace that based on the investment. As the money came in, we had to keep spending and building it out. I eventually raised about $1.2 million, but it came in bits and pieces and over a period of time, primarily from the West Coast. There was a compromise in that I decided to have the company here, but I also realized that I needed to be traveling a lot. I made several trips to the West Coast, met with funders, with potential customers. So even though the company was based here, most of the work in terms of investors and customer activity was outside of Buffalo.”

GEORGE CHAMOUN, Synacor co-founder.

“We didn’t have money but we had folks who helped us, and that’s one of the things Buffalo does have. You’re not just a number here. We have folks in the community who want you to succeed.”

SRIHARI on how things changed:
“I wouldn’t say that Buffalo turned around, but it is addressing the issue of creating a climate and a culture for entrepreneurs, mentors and investors. That’s maturity in our marketplace that will help the next generation of entrepreneurs. We have much more support now.”

EICH on moments of doubt:
“Early on, they happen quite frequently and you say to yourself, ‘This is not going to work.’ Or it might have worked in a couple discreet instances, but it won’t work or widespread availability because we can’t get it to scale or get all the campuses to consume something in a unified way. But then some days we had great victories — whether that was feedback from our membership or something that clicked in the product — and we felt like this was going to be a great company.”

REICH on being acquired by a large corporation in 2012:
“It’s been an adjustment from making decisions to making recommendations. It’s an adjustment in the way that you’d think. Instead of being a direct line, there are points on that line that get you the end result. We were lucky in that the folks at Higher One wanted us to succeed and realized that there were things about Campus Labs that were unique. At most critical times, they deferred to us and made sure we were making the right decision for Campus Labs, for the employees who work here and for the member campuses that use our platforms. They taught us a lot, too, and we were able to implement best practices and things they felt were important for us to grow up and take that next step.”

REICH on Buffalo’s underpinnings:
“It’s at a good place now from what it was previously, and it still has a long way to go. The ingredients are here: small universities are bringing a new crop of candidates to work in innovative companies. The bones are here to begin the entrepreneurial community, but we need a workforce that is less-exiting, less-competing roles — a whole cast of people who are begging for an interesting opportunity. Many people would like to work in a startup company. We just need a few people who want to take the risk and start those companies.”
