State University of New York at Buffalo
What is a Pattern?

“A pattern is the opposite of chaos; it is an entity vaguely defined, that could be given a name.”

A pattern is an abstract object, such as a set of measurements describing a physical object.
Examples of Patterns

- Handwritten Characters
- UPC Bar-Code
- Fingerprint
- Animal Footprint
- Data Trend
- Postnet Bar Code
PR Definitions

• Theory, Algorithms, Systems to put Patterns into Categories
• Classification of Noisy or Complex Data
• Relate Perceived Pattern to Previously Perceived Patterns
Example Problem: Handwritten Digit Recognition

- Handcrafted rules will result in large no of rules and exceptions
- Better to have a machine that learns from a large training set

Wide variability of same numeral
Role of Machine Learning

- Principled way of building high performance information processing systems
- **ML vs PR**
  - ML has origins in Computer Science
  - PR has origins in Engineering
  - They are different facets of the same field
- **Language Related Technologies**
  - IR, NLP, DAR, ASR
  - Humans perform them well
  - Difficult to specify algorithmically
Machine Learning

• Programming computers to use example data or past experience

• Well-Posed Learning Problems
  – A computer program is said to learn from experience $E$
  – with respect to class of tasks $T$ and performance measure $P$,
  – if its performance at tasks $T$, as measured by $P$, improves with experience $E$. 
Classification Process
(Decision as opposed to Inference)
Pattern Recognition Applications

- **SENSORY**
  - Vision
    - Face/Handwriting/Hand
  - Speech
    - Speaker/Speech
  - Touch
    - Haptics
  - Olfaction
    - Apple Ripe?

- **TEXTUAL DATA**
  - Text Categorization
  - Information Retrieval
  - Data Mining
  - Intrusion Detection
  - Genome Sequence Matching
Pattern Recognition Processes

- Objects to be classified are sensed by transducer (camera)
- Signals are preprocessed
- Features are extracted
- Classification is emitted
Generalization
Pattern Recognition System
Design Cycle

start

collect data

choose features

choose model

train classifier

evaluate classifier

end
Document Recognition Applications

- Optical Character Recognition (OCR)
- Handwriting Recognition
- Writer Recognition
Writer Recognition

Preprocessing

Features

Similarity
Address Interpretation Problem

Pattern recognition tasks
– object recognition (address vs non-address)
– two-class discrimination (mp vs hw)
– few class recognition (digits)
– holistic vs analytical (words)
– contextual-hmm(zip codes, words)
– Many classes, but cataloged (postal directory)
Contextual Information

• Country/State/City
• ZIP Code
• Street Name
• Primary No (Street/PO Box)
• Secondary No (Apt)
• Firm/Personal Name
