Automatic Scoring of Handwritten Essays using Latent Semantic Analysis

Sargur Srihari, Jim Collins, Rohini Srihari, Pavithra Babu and Harish Srinivasan

Center of Excellence for Document Analysis and Recognition (CEDAR)
Department of Computer Science and Engineering
University at Buffalo, State University of New York
Overview of Talk

• Reading/Writing by People/Computers
  – Importance to Secondary Schools
  – Role of Computers: Artificial Intelligence
  – School Assessment Test
  – Performance Measurement

• Technology
  – Optical Handwriting Recognition (OHR)
  – Automatic Essay Scoring (AES)
  – Proposal for an Integrated System
3Rs: Computers and Humans

As a goal of Artificial Intelligence

- Computers extensively assist people in the domain of doing arithmetic
- Writing cannot be imagined without the use of computers.
- Reading by computer is the last frontier:
  - Grand challenge of AI: read a text-book chapter and answer questions at end

As a Human Skill Taught in Schools

- Reading comprehension is necessary for
  (i) academic achievement in all school subjects
  (ii) for economic self-sufficiency in cognitively demanding work environments
- Improving reading comprehension will provide all members of society with equal opportunities to attain a high level of literacy
- Writing is the primary means of testing students on state assessments
- Require appropriate assessment methods computers can help
THE MAKINGS OF A STAR

by L. HALL

I'm going to be a star, I know it. I'm not sure quite how, but I have lots of time to figure that out. Maybe I'll be an actor, or a baseball player. Or I'll play basketball; I just need time to decide.

At school, my teacher shakes her head over my homework. "Garrett, this handwriting is terrible. How do you expect anyone to read it? What are you going to do when you have a job and your boss can't read your writing?"

Not a problem. "I'm going to be my own boss," I say, tossing a crumpled paper into the wastebasket. "I'll be able to hire secretaries to type everything for me." The class laughs. The teacher smiles and shakes her head again. The bell rings. "The bell is the signal," I say. "But don't forget to take the trash.""}

While the vacuum rolls over the vast brown carpet in the living room, I imagine the roar of the crowd, the unending cheers, the thunderous applause. Oh, it'll happen. I'm sure of it. I'll drive through the streets in a bright red convertible, leading a parade. A band will march behind me, while people crowd the streets in order to get a look at me, a hometown boy who made it big. So big an armored car follows me whenever I go, full of cash for me to spend. I reach into a bag on the seat next to me and toss handfuls of cash into the crowds of people. The cheers are deafening.

Whoever heard of a star riding the bus? I'll be cruising in a car the day I turn sixteen. "Forget it," I tell Mr. Rodriguez, who has once again disappeared under the hood of his car.

4. Garrett holds the dinner roll to his ear.  
   A. acts like a clown.  
   B. annoys his parents.  
   C. pretends it is a car telephone.  
   D. blocks out his mother's voice.

7. The author wants the reader to think that Garrett:
   A. is lighthearted.  
   B. is a poor student.  
   C. has a bright future.  
   D. has a vivid imagination.

How do the adults' comments to Garrett contribute to the development of the story? Use details and information from the story to support your answer.
Why Automatic Assessment Technologies?

- Timely scoring and reporting results is difficult
- Intense need to test later in school year for
  - capturing most student growth and
  - requirement to report scores before summer break
- Biggest challenge is reading and scoring handwritten portion of large scale assessment
- Automated marking of written text assignments has great value to teachers and educational administrators
  - When large nos. of assignments are submitted at once,
  - teachers bogged down to provide consistent evaluations and high quality feedback to students
  - within short time frame-- in days not weeks
Test Modalities

• On-Line
  – Key-boarding skills
    • How early to introduce?
  – Computer network down-time
  – Academic integrity

• Paper and Pencil
  – Natural means of communication
Relevant Technologies

1. Optical Handwriting Recognition (OHR)
   - Scanning
   - Form analysis and removal
   - Handwriting recognition and interpretation

2. Automatic Essay Scoring (AES)
   - Latent Semantic Analysis (LSA)
OHR: State of the Art

• OHR differs from dynamic handwriting recognition
  – as used in PDAs
• OHR System in use by USPS
  – 90% automatically interpreted
• Systems in use for Questioned Document Examination
  – CEDAR-FOX
American First Ladies

When George Washington was elected the first President of the United States, there was much discussion about the role his wife, Martha, should play. “Lady Washington,” she people began to call her. But Martha did not want to be treated like royalty or aristocracy. She decided that she would be an equal partner with her husband on social occasions. By doing this, she established a very important role for the President’s wife—“hostess for the nation.”

That role was expanded by James Madison’s wife, Dolley Madison, the first woman to be called “First Lady.” During the early 1800s, women had few rights. They could not vote or take part in politics. Married women were not even allowed to own property or make a will. A woman’s education was usually limited to homemaking skills. But Dolley Madison came from a Quaker family whose community opened its schools to boys and girls. Dolley became an ongoing woman with strong opinions, whose influence on her husband was well known. She was also considered to be the center of society in Washington, D.C., hosting receptions at which politicians and diplomats gathered along with the general public. After her death in 1849, Dolley was honored by President Zachary Taylor, who called her “truly our First Lady for half a century.”

Many other First Ladies had strong influences on their husbands, but a woman who really made the job her own was Anna Eleanor Roosevelt. The wife of Franklin Delano Roosevelt, just two days after her husband’s inaugural in 1933, Eleanor held the first press conference ever given by a presidential wife. During FDR’s presidency, Eleanor was always there with suggestions, proposals, and ideas. Sharecroppers, garment workers, students, and other people whom she had encountered on her travels were brought to Washington to meet the President.

1. sharecropper: tenant farmer

Travel she did—some 38,000 miles in her initial year as First Lady. FDR, weakened by polio, which he had contracted in 1921, was not able to travel easily. Eleanor became the “eyes and ears” of her husband, often making fact-finding trips for him. She saw and inspected everything from prisons to hospitals during those years of the Great Depression. She also traveled across the country on lecture tours, wrote articles for magazines, and even wrote a daily newspaper column. During World War II, she became FDR’s ambassador to the troops overseas. After her husband’s death in 1945, Eleanor was appointed U.S. delegate to the United Nations, where she helped to create the Universal Declaration of Human Rights.

To honor Eleanor Roosevelt’s life of service, President Harry Truman called her “The First Lady of the World.” At her funeral in 1962, Eleanor Roosevelt’s remarkable career was summed up by former presidential candidate Adlai Stevenson: “She would rather light a candle than curse the darkness.”

2. the Great Depression: a period of tremendous economic hardship in the United States and other countries during the 1930s.

1920 Great Depression begins
1978 United States Constitution gives women the right to vote
1920 19th Amendment gives women the right to vote
Sample Question and Answers

How was Martha Washington’s role as First Lady different from that of Eleanor Roosevelt? Use information from American First Ladies in your answer.

Martha Washington did not want to be treated like royalty in overseeing the duties to be an equal partner with her husband in social occasions. Martha established a very important role for the President’s wife—“hostess for the nation.”

Eleanor Roosevelt was the first lady. She became the “eyes and ears” of her husband, often making fact-finding trips for him. She also traveled abroad to lecture tours, wrote articles for magazines, and even wrote a daily newspaper column. She became FDR’s ambassador to the troops overseas. Eleanor did more things than Martha Washington.

One way that Martha was different from Eleanor Roosevelt is that Martha didn’t have to be an equal partner with her husband. Instead, she focused on public and social events, whereas Eleanor Roosevelt took on more active roles in the administration and public affairs.

Latent Semantic Analysis Approach to AES

• Information Retrieval (IR) technique
• Holistic characteristics of answer document
• Useful for document classification
• Coarse granularity
• Need sample answer documents
• No explanatory power,
  • e.g., principal component value = 30

Human graded documents form training set
Test document is matched against graded documents
Latent Semantic Analysis (LSA)

- **Goal:** capture “contextual-usage meaning” from document
  - Based on Linear Algebra
  - Used in Text Categorization
  - Keywords can be absent

**Document term matrix**

</table>

**SVD:**

\[ M = USV \]

where

- **S** is 6 x 6: diagonal elements are *eigen values* of for each Principal Component direction

**Projected locations of 10 Answer Documents in two dimensional plane**

**New documents**
Latent Semantic Analysis

- LSA statistically studies how the variations in term choices and variations in answer document meanings are related.
- The simultaneous representation of all the answer documents as points in semantic space.
Dimensionality of Semantic Space

- Initial dimensionality = number of terms in the document
- Dimensionality Reduction – Using SVD
  - Small enough to facilitate elimination of irrelevant representations
  - Large enough to represent the structure of the answer documents
Singular Value Decomposition

- SVD or two-mode factor analysis decomposes this rectangular matrix into three matrices.

\[ M = T S D^T \]

- \( M \) – is the rectangular term by document matrix with \( t \) rows and \( n \) columns
- \( T \) – is the \( t \times m \) matrix, which describes rows in the matrix \( M \) as, left singular vectors of derived orthogonal factor values
- \( D \) – is the \( m \times n \) matrix, which describes columns in the matrix \( M \) as, right singular vectors of derived orthogonal factor values
- \( S \) – is the \( m \times m \) diagonal matrix of singular values such that when, \( T \), \( S \) and \( D^T \) are matrix multiplied \( M \) is reconstructed.
- \( m \) - is the rank of \( M = \min(t, n) \)
Reducing the Dimensionality

\[ M \times n \text{ Matrix} = T \times m \text{ Matrix} \]

\[ M \times n \text{ Matrix} = T \times k \text{ Matrix} \]

\[ S \times m \text{ Matrix} = D^T \times n \text{ Matrix} \]

\[ S = S_i \times k \text{ Matrix} \]

\[ D^T = D^T \times k \text{ Matrix} \]
Similarity Measures

Inner product (dot) measure:

\[ M(X, Y) = \sum_{i=1}^{n} x_i y_i \]

Cosine measure:

\[ M(X, Y) = \frac{\sum_{i=1}^{n} x_i y_i}{\sqrt{\sum_{i=1}^{n} x_i^2 \sum_{j=1}^{n} y_j^2}} \]

Manhattan distance measure:

\[ M(X, Y) = \sum_{i=1}^{n} |x_i - y_i| \]

Euclidean distance measure (2-norm):

\[ M(X, Y) = \sqrt{\sum_{i=1}^{n} (x_i - y_i)^2} \]

\[ m \)-norm measure:

\[ M(X, Y) = \left( \sum_{i=1}^{n} (x_i - y_i)^m \right)^{\frac{1}{m}}, \quad m \in N \]

Where \( X = (x_1, x_2, \ldots, x_n) \) and \( Y = (y_1, y_2, \ldots, y_n) \) are two \( n \)-dimensional vectors.

</table>
LSA Training

- Answer documents are preprocessed and tokenized into a list of words or terms
  - using document pre-processing steps described earlier
- Answer Dictionary is created which assigns a unique file ID to all the answer documents in the corpus
- Word Dictionary is created which assigns a unique word ID to all the words in the corpus
- Index with the word ID and the number of times it occurs (word frequency) in each of the training documents is created
- Term-by-Document Matrix, M is created from the index, where $M_{ij}$ is the frequency of the $i^{th}$ term in the $j^{th}$ answer document
LSA Validation

- A set of human graded documents, known as the validation set, are used to determine the optimal value of k (matrix dimension)
- Each query vector is compared with the training corpus documents
- The following steps are repeated for each document.
  - A vector $Q$ of term frequencies in the query document is created, similar to the way $M$ was created
  - $Q$ is then added as the 0th column of the Matrix $M$ to give a matrix $M_q$
  - SVD is performed on the matrix $M_q$, to give the TSD
LSA Validation

- Delete \( m - k \) rows and columns from the \( S \) matrix, starting from the smallest singular value to form the matrix \( S_1 \).
- The corresponding columns in \( T \) and rows in \( D \) are also deleted to form matrices \( T_1 \) and \( D \) respectively.
- Construct the matrix \( M_{q1} \) by multiplying the matrices \( T_1S_1D \).
- The similarity between the query document \( x \) (the 0th column of the matrix \( M_{q1} \)) and each of the other documents \( y \) in the training corpus (subsequent columns in the matrix \( M_{q1} \)) are determined by the cosine similarity measure.
- The training documents with the highest similarity score, when compared with the query answer documents are selected and the human scores associated with these documents are assigned to the documents in question respectively.
- The mean difference between the LSA graded scores and that assigned to the query by a human grader is calculated for each dimension over all the queries.
- The dimension with least mean difference is selected as the optimal dimension \( k \) which is used in the testing phase.
LSA Testing

• The testing set consists of a set of scored essays not used in the training and validation phases
• The term-document matrix constructed in the training phase and the value of $k$ determined from the validation phase are used to determine the scores of the test set
Application of LSA to “American First Ladies”: Sample Answer Texts

Score: 5

M. Washington's role as first Lady was different from E. Roosevelt's because she didn't want to be called first lady, and because she didn't want to be treated like royalty or aristocracy.

E. Roosevelt's role as first Lady was different from M. Washington's because she liked to called First Lady. She was always there with suggestions, proposals, and ideas, she also traveled across country on lecture tours, wrote articles for magazines, and even wrote a daily newspaper column. Later in 1945 after her husband's death; she was appointed U.S. delegate to the United Nations, (where she helped to create the Universal Declaration of Human Rights); and at her funeral in 1962, President Harry Truman called her "the First Lady of the World"; and former presidential candidate Adlai Stevenson summed up E. Roosevelt's remarkable career by saying: "she would rather light a candle than curse the darkness".

Score: 0

Dolley became an outgoing woman with strong opinions, whose influence on her husband was well known.

Eleanor became the "eyes and ears" of her husband, often making fact finding trips for him.
Data Set

• The corpus: 71 handwritten answer essays
  – 48 by students and 23 by teachers
• Each essay manually assigned a score by education researchers
• Essays divided into 47 training samples, 12 validation samples and 12 testing samples
• Training set score distribution (on 7-point scale): 1,8,9,10,2,9,8
• Validation and testing set distributions 0,2,2,3,1,2,2
Two different sets of 71 transcribed essays were created, the first by manual transcription (MT) and the second by the OHR system.

The lexicon for the OHR system consisted of unique words from the passage to be read, which had a size of 274.

Separate training and validation phases were conducted for the MT and OHR essays.

For the MT essays, the document-term matrix $M$ had $t = 490$ and $m = 47$ and the optimal value of $k$ was determined to be 5.

For the OHR essays, the corresponding values were $t = 154$, $m = 47$, and $k = 8$.

The smaller number of terms in the OHR case is explained by the fact that several words were not recognized.
Comparison of Human and Machine Scores

**Manual Transcription**

Mean difference = 1.17

**OHR**

Mean difference = 1.75
Latent Semantic Analysis: Pros/Cons

- **Advantages**
  - Grading Can be done based on a single authoritative source - absolute
  - Grading can be done based on comparing student’s answers with each other – relative
  - Robust

- **Disadvantages**
  - Document level: coarse granularity
  - Values of principal components not meaningful to human evaluator
  - Technical issues
    - Problem of determining optimal dimension
      - Small reduction –
        » helps in fitting all the structure
        » reconstructs the original matrix and captures latent semantic information
      - Large reduction –
        » filters out all non-relevant details
        » but renders matrix too noisy
Summary and Conclusion

- Reading/Writing is important to academic achievement in schools
- Assessment Technologies are Important for timely scoring
- Key Components in developing a solution are:
  1. OHR (pattern recognition)
  2. AES
     - IE (computational linguistics) for Analytic Rubrics
     - LSA for Holistic Rubrics
  3. Reading/Writing assessment, e.g., traits, data from school systems
Future Work

• **Analytic Rubric: 6 + 1 Traits**
  
  - **Ideas**
    - purpose, theme, primary content, main point or main story line of piece, together with documented support, elaboration, anecdotes
  
  - **Organization**
    - internal structure of piece-- like an animal’s skeleton, or framework of a building under construction-- holds whole thing together
  
  - **Voice**
    - reader-writer connection-- part concern for the reader, part enthusiasm for the topic, and part personal style
  
  - **Word Choice**
    - skillful use of language to create meaning-- “just right” word or phrase
  
  - **Sentence Fluency**
    - rhythm and beat of the language-- graceful, varied, rhythmic almost musical. It’s easy to read aloud
  
  - **Conventions**
    - punctuation, spelling, grammar, and usage, capitalization, paragraph indentation
  
  - **Presentation**
    - Neatness of Handwriting, appearance of page

• **Holistic Rubric (Less Detailed):**
  
  - 4 Excellent 3 Good, 2 Poor 1 Very Poor 0 Off Topic
Thank You
